Smart Budget Tracker with Automated Insights

- **Description**: Develop a personal finance tracker that allows users to input their expenses and incomes manually or upload bank statements (CSV format). The system should use Pandas to categorize expenses and provide AI-driven spending insights.
- **Tech Stack**: Flask, Pandas, Matplotlib/Plotly, SQLite/PostgreSQL, AI-based expense classification.
- **Unique Aspect**: Implement an ML model to predict future expenses based on past trends.

AI-Powered Personal Study Planner

- **Description**: A smart web app that helps students schedule their study time based on their syllabus, exam dates, and personal learning speed. The system should recommend the best time slots using AI.
- **Tech Stack**: Flask, Pandas, SQLite, OpenAI API for smart suggestions.
- **Unique Aspect**: Dynamic adjustments based on user performance and missed study sessions.

Intelligent Road Trip Planner

- **Description**: A web-based trip planner that helps users plan road trips by suggesting the best routes, stops, and sightseeing spots based on user preferences.
- **Tech Stack**: Flask, Google Maps API, OpenWeather API, SQLite/PostgreSQL.
- **Unique Aspect**: Real-time traffic and weather-based re-routing feature.

Automated Resume-to-Portfolio Converter

- **Description**: Users upload their resumes, and the system automatically generates a professional portfolio website from the data.
- **Tech Stack**: Flask, Pandas, HTML/CSS (Jinja templates), SQLite/PostgreSQL.
- **Unique Aspect**: AI-generated portfolio descriptions based on user experience.

Personalized Job Recommendation System

- **Description**: A job portal where users input their skills, and the system recommends the best job openings using AI-based matching.
- **Tech Stack**: Flask, Pandas, Scrapy (for web scraping job listings), SQLite/PostgreSQL.
- **Unique Aspect**: Provide AI-powered resume optimization tips based on job descriptions.

AI-Powered Daily Productivity Tracker

- **Description**: A dashboard where users log daily activities, and AI gives productivity scores with improvement suggestions.
- **Tech Stack**: Flask, Pandas, OpenAI API, SQLite/PostgreSQL, Chart.js for visualizations.
- **Unique Aspect**: AI-based prediction of unproductive habits and time-wasting activities.

Smart Interview Preparation Tracker

- **Description**: A web app where users enter job roles and receive a **customized** interview preparation schedule, including coding problems, behavioral questions, and mock interviews.
- **Tech Stack**: Flask, Pandas, SQLite, Web Scraping (LeetCode, Glassdoor API).
- **Unique Aspect**: AI-based difficulty level adjustment based on user progress.

Automated Meeting Summarizer & Action Item Tracker

- **Description**: A platform where users upload **meeting recordings or transcripts**, and the system summarizes key points, identifies action items, and assigns tasks.
- **Tech Stack**: Flask, OpenAI Whisper API (for speech-to-text), NLP (spaCy), SQLite/PostgreSQL.
- **Unique Aspect**: Converts summaries into **Kanban-style task boards**.

Dynamic AI-Powered E-Commerce Price Tracker

- **Description**: Users can enter a product name, and the system fetches price trends from multiple e-commerce platforms, notifying them of the best time to buy.
- **Tech Stack**: Flask, Web Scraping (BeautifulSoup/Selenium), Pandas, SQLite/PostgreSQL.
- **Unique Aspect**: AI predicts **future price drops** based on historical trends.

Smart Job Resignation & Offer Negotiation Assistant

- **Description**: A platform where professionals enter details of **job offers** or **resignation scenarios**, and AI generates personalized resignation letters and negotiation scripts.
- **Tech Stack**: Flask, OpenAI API, NLP (spaCy), SQLite/PostgreSQL.
- **Unique Aspect**: AI analyzes **salary trends** and suggests **negotiation tactics**.

Personalized Learning Roadmap Generator

- **Description**: A platform where users enter their career goals (e.g., become a Data Scientist), and the system generates a step-by-step learning roadmap with free/paid course recommendations.
- **Tech Stack**: Flask, Pandas, Scrapy (for fetching course data), SQLite/PostgreSQL.

- **Unique Aspect**: AI-based weekly progress tracking and personalized learning adjustments.

Smart Habit Tracker with AI-Powered Insights

- **Description**: A full-stack web app where users log daily habits, and AI predicts how habits impact productivity and mental well-being.
- **Tech Stack**: Flask, Pandas, SQLite/PostgreSQL, OpenAI API.
- **Unique Aspect**: AI-based habit improvement suggestions with a streak-tracking system.

Automated Recipe Generator Based on Available Ingredients

- **Description**: Users enter ingredients they have at home, and the system suggests recipes using AI.
- **Tech Stack**: Flask, Pandas, OpenAI API, SQLite/PostgreSQL, Scrapy (for scraping recipes).
- **Unique Aspect**: AI-based nutrition analysis and meal planning suggestions.
